Clearing The Air On Flea Control

FLEAS! The nemesis of cats and dogs and pet owners everywhere. Of course, fleas always attempt to make life miserable for your pet and yourself by causing endless itching and scratching. As many of you know, there are several flea prevention products being advertised on the market. One heavily advertised product, in particular, is *Sentinel*, a combination medication. Not all of these products get the same instance, while effective, they prevent fleas by affecting the flea egg in such a way as to make it unable to hatch. The disadvantage of this product is that: A.) the flea must bite your pet in order to ingest the medication and start the eradication process, and B.) you have to wait for all the non-hatching eggs. This can be a long and frustrating route to flea control. These same limitations apply to *Program* and some other flea medications. It is for this reason that we so highly recommend **Frontline flea control**. Frontline kills adult fleas die immediately without the need to bite your pet. This way, customers and their pets get an immediate and sustained eradication and control that we like the Frontline a liquid that is applied topically especially good benefit pills or powders to force feed, an

When you consider the money you save by NOT buying dips, shampoos, flea collars etc., Frontline is definitely the wave of the future in flea control.

Frontline will also control ticks during the summer if given at 30 day intervals. We generally sell the Frontline product in a pack that contains three doses of liquid. On average, each dose lasts two months with regard to fleas, thus providing you with six months of treatment per purchase. When you consider the money you save by NOT buying dips, shampoos, flea collars etc., Frontline is definitely the wave of the future in flea control.
