Furmination Shed-Less Treatment

The world of pet lovers - and that's pretty much the entire world - has been waiting for a truly effective, inexpensive, easy-to-use solution to the pet-hair-and-dander problem. Now its here. Its an ingeniously simple grooming treatment called FURminator shed-less treatment, centered around a patented new deShedding tool, and it just might change the world - one pet at a time - so pet-lovers everywhere can enjoy their pets to the fullest.

The thinking behind the FURminator shed-less treatment is simple logic - the more hair you remove from your pet, the less hair you have to remove from your couch, your clothes, your floors, your carpet, your car and your home. But typical pet grooming systems merely wash and comb your pet's hair without addressing the underlying problem - your pet's undercoat. Your pet's undercoat can become a dense mess of loose, dead hair - and the major source of shedding. The FURminator treatment was developed to grab and remove - not cut, but remove - undercoat hair quickly and easily. Neither the specialized tool nor the process hurts your pet, and all-natural deShedding shampoo & deShedding solution are great for promoting a healthy coat and healthy skin on your pet.

The treatment starts with the FURminator deShedding shampoo and a massaging bath that separates your pet's coat, stimulates your pet's hair follicles and invigorates circulation. Next, the deShedding solution is applied. This formulated all-natural solution helps loosen the undercoat and loose hair. Then, a high velocity dryer separates and eliminates the excess coat on the pet. The targeted blow drying followed by thorough brushing and combing. Finally, the revolutionary FURminator deShedding tool is then used to extract loose hair and undercoat from your pet . . leaving a shiny and healthy top coat.
